51	<p>Comprehension</p> <p>Read the Passage and answer the Questions:</p> <p>Human skin maintains its health and smoothness by means of a fatty substance called sebum, secreted by millions of glands located near the roots of hair. This oily substance oozes to the skin and forms a protective mixture with sweat, to keep our skin moist and pliable. In very cold weather the sebum congeals and does not come to the surface of the skin; as a result, the skin becomes dry and chapped. Over-production or under-production of sebum causes excessively oily skin or excessively dry skin. During adolescence there is a rapid increase in sebum production causing skin eruptions. But as we grow older, sebum production decreases, causing dry skin, wrinkles and lack of elasticity.... Although, all skins seem to look alike, our skin is particularly our own so that our fingerprint patterns are unique and can never be found duplicated in any other skin pattern. Similarly, when there is a skin transplant, the skin is taken from another part of the same body, otherwise the body is liable to reject it.</p>
	<p>Question Description</p> <p>The discussion of <i>sebum</i> in the passage above, is relevant because it is</p>
	<p>A</p> <p>secreted right at the roots of hair on the skin</p>
	<p>B</p> <p>an oily substance oozing to the skin</p>
	<p>C</p> <p>protective of the health of human skin</p>
	<p>D</p> <p>a protective mixture with sweat</p>
	<p>E</p> <p>None of the above</p>
	<p>Correct Answer</p> <p>C</p>
	<p>Marks</p> <p>1</p>
