Title *	Question Paper Answer Key
OES Exam *	GPSC06202503 Assistant Agriculture Officer/Farm Manager Completed 2025-09-28

1	Question Description	Which of the following is cotton leaf roller
	A	Oxycarenus laetus
	B	Sylepta derogata
	C	Dysdercus cingulatus
	D	Pempherulus affinis
	E	None of the above
	Correct Answer	B
	Marks	1

2	Question Description	The adoption of climate resilient varieties of rice tolerant to submergence is linked to which gene
	A	QSD 1
	B	ORZ 1
	C	SUB 1
	D	SR3 1
	E	None of the above
	Correct Answer	C
	Marks	1
3	Question Description	Seed treatment of pulses is done with
	A	Azotobactor
	B	Rhizobium
	C	Azospirillum
	D	Phospotica
	E	None of the above
	Correct Answer	B
	Marks	1

4	Question Description	Whiptail of crucifers is due to deficiency of
	A	Cu
	B	Mo
	C	Zn
	D	P
	E	None of the above
	Correct Answer	B
	Marks	1
5	Question Description	Vertical temperature decrease is called lapse rate and the normal lapse rate is
	A	4.5 degree celcius per km
	B	6.5 degree celcius per km
	C	9.5 degree celcium per km
	D	12 degree celcius per km
	E	None of the above
	Correct Answer	B
	Marks	1

6	Question Description	Average runoff coefficient for urban rooftops in rainwater harvesting is
	A	0.2–0.3
	B	0.4–0.5
	C	0.7–0.9
	D	1.0
	E	None of the above
	Correct Answer	C
	Marks	1
7	Question Description	Which physical method most directly reduces soil erosion on sloped farmlands?
	A	Deep ploughing
	B	Terrace farming
	C	Mulching
	D	Frequent tillage
	E	None of the above
	Correct Answer	B
	Marks	1

8	Question Description	Farmer owing less than 2.5 acre of dry land or 1.25 acre of wet/irrigated land is called as
	A	Small farmer
	B	Marginal farmer
	C	Large farmer
	D	Land lord
	E	None of the above
	Correct Answer	B
	Marks	1
9	Question Description	A mixed cropping system enhances climate resilience because
	A	It simplifies pest management
	B	It buffers against total crop failure
	C	It makes harvesting easier
	D	It yields more and give more profit
	E	None of the above
	Correct Answer	B
	Marks	1

10	Question Description	Tendency of two or more genes to stay together during inheritance is called as
	A	Crossing over
	B	Linkage
	C	Gene interaction
	D	Lethal genes
	E	None of the above
	Correct Answer	B
11	Marks	1
	Question Description	In quincunx system the total plants are nearly double than
	A	Square method
	B	Rectangular method
	C	Countour menthod
	D	Hexagonal method
	E	None of the above
	Correct Answer	A
	Marks	1

12	Question Description	For calculating value of P, p2O5 is multiplied by
	A	0.27
	B	1.37
	C	2.29
	D	3.00
	E	None of the above
	Correct Answer	C
	Marks	1
13	Question Description	Two table spoons in dosing of drugs is equal to
	A	Organophosphate inhibit
	B	acetylcholinesterase
	C	Entirokinase
	D	Urease
	E	None of the above
	Correct Answer	A
	Marks	1

14	Question Description	Which of the following is not a common rainwater harvesting method?
	A	Desalination plants
	B	Rooftop systems
	C	Surface runoff collection
	D	Percolation pits
	E	None of the above
	Correct Answer	A
	Marks	1
15	Question Description	Fusaric acid play an important role in pathogenesis of
	A	Wilt
	B	Blight
	C	Rust
	D	Smut
	E	None of the above
	Correct Answer	A
	Marks	1

16	Question Description	The irrigation efficiency of a system with 60% conveyance efficiency and 70% application efficiency is:
	A	65 %
	B	42 %
	C	66 %
	D	60 %
	E	None of the above
	Correct Answer	B
	Marks	1
17	Question Description	The S-M-C-R-E are the elements of which model?
	A	Aristotles model
	B	Berlo's model
	C	Leagan's model
	D	Rogers and Shoemaker's model
	E	None of the above
	Correct Answer	D
	Marks	1

18	Question Description	Red soil has the dominance of the following clay mineral
	A	Illite
	B	Kaolinite
	C	Saponite
	D	Mica
	E	None of the above
	Correct Answer	B
	Marks	1
19	Question Description	The new recent pest on maize is
	A	Spodoptera frugiperda
	B	Sesamia inference
	C	Spodoptera litura
	D	Helicoverpa armigera
	E	None of the above
	Correct Answer	A
	Marks	1

20	Question Description	Arrangement and organization of primary and secondary particles of soil is called as
	A	Soil density
	B	Soil porosity
	C	Soil structure
	D	Soil texture
	E	None of the above
	Correct Answer	C
	Marks	1
21	Question Description	Exception to Mendel's law of independent assortment was first discovered by
	A	Morgan
	B	Sturtevant
	C	Bateson and Punnett
	D	Weismann
	E	None of the above
	Correct Answer	C
	Marks	1

22	Question Description	Rodolia cardinalis is a predator insect of
	A	Icerya purchasi
	B	Pseudococcus gahani
	C	Pseudococcus nipoe
	D	Cyrtosiphum mundulus
	E	None of the above
	Correct Answer	A
	Marks	1

23	Question Description	Safrole is a toxicant found in
	A	Beans
	B	Spices
	C	Almonds
	D	Cashew apple
	E	None of the above
	Correct Answer	B
	Marks	1

24	Question Description	The genotypic ratio of a monohybrid cross will be
	A	3:1:1
	B	1:1:1
	C	1:2:1
	D	2:1:1
	E	None of the above
	Correct Answer	C
	Marks	1
25	Question Description	In conservation agriculture, the most stable soil aggregate size fraction improved is:
	A	Micro-aggregates (<0.25 mm)
	B	Macro-aggregates (>0.25 mm)
	C	Sand fraction
	D	Silt fraction
	E	None of the above
	Correct Answer	B
	Marks	1

26	Question Description	ISTA seed vigour definition was suggested by
	A	Perry
	B	Ihsen
	C	Pollock
	D	Borlaug
	E	None of the above
	Correct Answer	A
	Marks	1
27	Question Description	The principal pigment present in red cabbage is
	A	Carotenoids
	B	Antrophyll
	C	Anthocyanin
	D	Cryptoxanthin
	E	None of the above
	Correct Answer	C
	Marks	1

28	Question Description	Aflatoxin is produced by
	A	Phytophthora infestans
	B	Aspergillus flavus
	C	Albugo candida
	D	Puccinia praminis
	E	None of the above
	Correct Answer	B
	Marks	1
29	Question Description	The causal organism of powdery mildew of grapes, which significantly reduced wine production in France is
	A	Plasmopara viticola
	B	Oidium vitis
	C	Uncinula necator
	D	Collectotrichum dematium
	E	None of the above
	Correct Answer	C
	Marks	1

30

Question Description	Which of the following is most drought hardy fruit crop recognized as a poor man's apple?
A	Ber
B	Litchi
C	Pineapple
D	Kiwi
E	None of the above
Correct Answer	A
Marks	1

31

Comprehension	READ THE PASSAGE BELOW AND ANSWER THE QUESTIONS: Despite the rapid proliferation of artificial intelligence across industries, there remains considerable skepticism about its capacity to emulate human creativity. While AI can synthesize vast data and mimic stylistic nuances, its output often lacks the unpredictability and emotional depth characteristic of genuine artistic innovation. Recent experiments in machine-generated literature and art have produced technically proficient results, yet critics argue these works are fundamentally derivative, echoing established patterns from human creators rather than originating new paradigms. Nevertheless, advocates insist that AI expands the boundaries of creativity, facilitating novel collaborations between humans and machines. Researchers point to hybrid projects that leverage algorithmic input as a catalyst for breakthroughs, suggesting a future where AI serves less as a replacement and more as an enhancer of human ingenuity. As the debate intensifies, questions persist on what constitutes truly original art and whether creative intuition can ever be programmed. Ultimately, the integration of AI into creative fields demands a reassessment not just of technology's capabilities but also of our definitions of artistry.
Question Description	According to the passage, why do critics regard AI-generated art as "fundamentally derivative"?
A	It often plagiarizes existing works
B	It replicates existing human patterns instead of creating new ones
C	It lacks any technical proficiency
D	It ignores stylistic nuances
E	None of the above
Correct Answer	B
Marks	1

READ THE PASSAGE BELOW AND ANSWER THE QUESTIONS:

Despite the rapid proliferation of artificial intelligence across industries, there remains considerable skepticism about its capacity to emulate human creativity. While AI can synthesize vast data and mimic stylistic nuances, its output often lacks the unpredictability and emotional depth characteristic of genuine artistic innovation. Recent experiments in machine-generated literature and art have produced technically proficient results, yet critics argue these works are fundamentally derivative, echoing established patterns from human creators rather than originating new paradigms. Nevertheless, advocates insist that AI expands the boundaries of creativity, facilitating novel collaborations between humans and machines. Researchers point to hybrid projects that leverage algorithmic input as a catalyst for breakthroughs, suggesting a future where AI serves less as a replacement and more as an enhancer of human ingenuity. As the debate intensifies, questions persist on what constitutes truly original art and whether creative intuition can ever be programmed. Ultimately, the integration of AI into creative fields demands a reassessment not just of technology's capabilities but also of our definitions of artistry.

Question Description

What role do AI advocates claim for artificial intelligence in the creative process?

A

Replacing human creators entirely

B

Restricting artistic boundaries

C

Enhancing human creativity through collaboration

D

Undermining originality in art

E

None of the above

Correct Answer

C

Marks	1

READ THE PASSAGE AND ANSWER THE QUESTIONS:

The phenomenon of language extinction presents a critical challenge to cultural diversity worldwide. Linguistic diversity encapsulates unique worldviews, traditions, and historical narratives intertwined within speech and expression. However, globalization and homogenizing forces of dominant languages continue to marginalize minority tongues, risking irreparable loss. Scholars argue that language preservation is not only about safeguarding words but also about protecting collective identities and knowledge systems rooted in indigenous languages. Revival efforts thus emphasize community participation, digital documentation, and intergenerational transmission to reinvigorate endangered languages. Despite advancements, practical challenges abound, including insufficient resources, political neglect, and urban migration patterns that detach younger generations from native idioms. Ultimately, the urgency lies in not just recognizing linguistic loss but mobilizing multifaceted strategies to preserve the tapestry of human expression for posterity.

Question Description

According to the passage, what does linguistic diversity encompass?

A

Economic progress

B

Unique worldviews and cultural narratives

C

Only words and grammar

D

Global business languages

E

None of the above

Correct Answer

B

Marks

60	Question Description	Choose the pair that best represents a similar relationship to the one expressed in the original pair of words. FISH : SHOAL
	A	wolf : pack
	B	elephant : jungle
	C	beagle : clan
	D	herd : peacock
	E	None of the above
	Correct Answer	A
	Marks	1

61

Question Description

Exports and imports, a swelling favourable balance of trade, investments and bank-balances, are not an index or a balance sheet of national prosperity. Till the beginning of the Second World War, English exports were noticeably greater than what they are today. And yet England has greater national prosperity today than it ever had. Because the income of average Englishmen, working as field and factory labourers, clerks, policemen, petty shopkeepers and shop assistants, domestic workers and other low-paid workers, has gone up.

The passage best supports the statement that:

A

a country's economic standard can be best adjudged by per capital income.

B

a country's balance of trade is the main criteria of determining its economic prosperity.

C

a nation's economy strengthens with the increase in exports.

D

English trade has continually increased since the Second World War.

E

None of the above

Correct Answer

A
